|-------|---------------|-------|-------|---------------|-------|-------|-----------------|-------------|
| | Height | Width | Depth | Height | Width | Depth | | |
| 685 | 1950 | 940 | 500 | 1785 | 868 | 440 | 682 | 265 |

Transportation made easy

Supplied in a single, easy-to-ship carton, the cabinet can be transported via a small van or truck, or even by carrying individual components by hand. Because you or the Gunnebo installation team assemble the cabinet on site, it can be erected in awkward or tight spaces, including basements and upper floors accessible only by stairs.

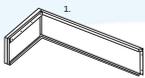

45 minutes to assembly

The Chubb safes Mekanno cabinet is a unique safe on the market today that can be self-assembled on site, enabling you to protect your valuables even in spaces that traditional safes cannot reach. In around 45 minutes, two people with simple tools can complete a quick and easy assembly. To move locations, simply disassemble the safe into its original components and transport with ease. Four adjustable shelves are offered on the cabinet.

Self-assembled security

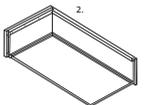

Once correctly installed, the Chubb safes Mekanno cabinet provides all the trusted security benefits of traditional welded cabinets, with the added advantage of easy transport and assembly. The cabinet is equipped with a certified EN 1300 Class A double-bitted key lock and can be customised with two optional "magic module" locks to your specific requirements. The anti-drill plate further secures the locks, delivering even greater protection against theft.

8 simple steps to build your secure cabinet

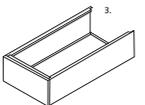

STEP 1.

Align base and side panel. Hand-tighten with bolt heads facing inwards.

STEP 2.

Repeat Step 1 for rear panel with side and base panels.

STEP 3.

Repeat Step 1 for second side panel with base and rear panel.

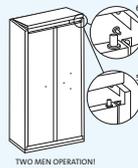

STEP 4.

Set the cabinet upright.

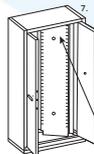

TWO MEN OPERATION!

Note: Building Mekanno is a job for at least two people. Care should be taken to wear appropriate personal protective equipment, use correct manual handling techniques and ensure a clear and safe working area.

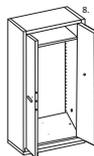

STEP 5.

Position top panel and insert bolts without tightening. Insert bottom hinge pins and position doors on top. Insert top hinge pin in top panel.

STEP 6.

Tighten all bolts using a screwdriver and spanner.

STEP 7.

Insert inner side panels.

STEP 8.

Insert inner base plate and position shelves using shelf clips (supplied).
