protection from fire(approx)—DIN 4102**
- **VdS grade locks.
Available with key lock or electronic lock**
- **Ready prepared for floor or wall fixing**

SPECIFICATION

SECURITY

Tested & certified EN 14 450 Class S2
Security level S2.

Robust safe body and door constructed from 6mm steel.

Internal hinges on a flush fitting door giving no lever or jack up points.

The door is secured by multi point, heavy duty, chrome plated locking bolts which are part of a 3 – way locking system, top, side and bottom bolts.

FIRE RESISTANCE

These safes are double walled and built according to DIN 4102 **.
The walls and door contain a filling of rock wool/glass wool or similar material which gives approximately 30 minutes protection against fire.

LOCK SPECIFICATION

The lock is protected with manganese 5mm hard plate to prevent drill penetration.

PT models

The door has a CAWI high security key lock. This is a VdS grade 8 lever double bitted key lock. The key is retained in the lock when the safe is open which meets insurance requirements.
2 keys are supplied with each safe and additional cut keys can be supplied at the time of order (additional charge).

ET electronic combination models

The door has an electronic combination lock. The **La Gard EM1520** is supplied by a leading manufacturer of access control devices. This is operated by a single 9v battery held in a compartment that can be accessed from outside the safe when it is necessary to change the battery.

It has 2 user codes and is operated with a changeable 6 digit PIN.
It has built in manipulation protection—3 incorrect attempts to open the safe will result in a timed lock out.

GENERAL

Offers protection for cash, valuables and documents
Several sizes are available in both key lock and electronic lock versions
Supplied with fully adjustable or removable shelves.

Attractive design and finish (RAL 7035—light grey) means this safe will blend into any office or domestic environment.
