Transporter Safes

High security Transporter models are manufactured from heavy gauge sheet steel with a fully welded construction. Transporters are available with either a slot deposit or roller deposit facility. Both models auto lock upon presentation of the safe compartment to the base plate. The Base Plate should be securely fitted to the vehicle floor. When locked into the fitted base plate the internal lid is enclosed and inaccessible. Transporter models offer greater resistance to tampering and will resist attack for a longer period than standard models (please note that as all checkmate safes these models are not intended for prolonged periods unattended).

Part No.	Description	L	W	H	Kg
WTS2/BR	Transporter Roll Top	330	180	310	11
WTS2/BS	Transporter Slot Top	330	180	220	9
WTS2/A	Additional Transporter Base (Base plate & anchor fitting only)	330	180		

All dimensions are in mm (L & W dimensions = base plate 'footprint' - actual safe is approx 5% smaller)

L = length W = width H = height Kg = weight

The Transporter Slotted Safe comes complete with a baffled entry slot and is ideal for depositing bank notes or sealed envelopes. Once through the slot your valuables drop into the safe compartment below. The contents are then accessed by removing the safe unit from the vehicle and unlocking an internal compartment door.

The Transporter Roll Top Safe comes with the ever-popular Roller deposit Top. The Roller deposit Top is ideal for the transportation of loose or bagged cash and offer extreme ease of use. The operator need only place loose or bagged items into the roller top, turn the roller handle and the contents will drop into the safe compartment below. The contents are then accessed by removing the safe unit from the vehicle and unlocking an internal compartment door.

All locks are registered to Checkmate Devices Ltd and each is supplied with 2 keys. Keyed alike and master key systems are available upon request.

Base plates are anchored to the vehicle floor using a fixing kit (supplied).
